

C Reference Card (ANSI)

Program Structure/Functions

| | |
|--|--------------------------------|
| <i>type fnc(type₁,...)</i> | function declarations |
| <i>type name</i> | external variable declarations |
| <i>main()</i> { <i>declarations</i> <i>statements</i> } | main routine |
| | local variable declarations |
| <i>type fnc(arg₁,...)</i> { <i>declarations</i> <i>statements</i> return <i>value</i> ; } | function definition |
| | local variable declarations |
| <i>/* */</i> | comments |
| <i>main(int argc, char *argv[])</i> | main with args |
| <i>exit(arg)</i> | terminate execution |

C Preprocessor

| | |
|---|-------------------------------|
| include library file | #include <filename> |
| include user file | #include "filename" |
| replacement text | #define <i>name text</i> |
| replacement macro | #define <i>name(var) text</i> |
| Example. #define max(A,B) ((A)>(B) ? (A) : (B)) | |
| undefine | #undef <i>name</i> |
| quoted string in replace | # |
| concatenate args and rescan | ## |
| conditional execution | #if, #else, #elif, #endif |
| is <i>name</i> defined, not defined? | #ifdef, #ifndef |
| <i>name</i> defined? | defined(<i>name</i>) |
| line continuation char | \ |

Data Types/Declarations

| | |
|--|----------------------------|
| character (1 byte) | char |
| integer | int |
| float (single precision) | float |
| float (double precision) | double |
| short (16 bit integer) | short |
| long (32 bit integer) | long |
| positive and negative | signed |
| only positive | unsigned |
| pointer to int, float,... | *int, *float,... |
| enumeration constant | enum |
| constant (unchanging) value | const |
| declare external variable | extern |
| register variable | register |
| local to source file | static |
| no value | void |
| structure | struct |
| create name by data type | typedef <i>typename</i> |
| size of an object (type is <i>size_t</i>) | sizeof <i>object</i> |
| size of a data type (type is <i>size_t</i>) | sizeof(<i>type name</i>) |

Initialization

| | |
|------------------------|--|
| initialize variable | <i>type name=value</i> |
| initialize array | <i>type name[]={value₁,...}</i> |
| initialize char string | char <i>name[]="string"</i> |

Constants

| | |
|---------------------------------------|---------------------|
| long (suffix) | L or l |
| float (suffix) | F or f |
| exponential form | e |
| octal (prefix zero) | 0 |
| hexadecimal (prefix zero-ex) | 0x or 0X |
| character constant (char, octal, hex) | 'a', '\ooo', '\xhh' |
| newline, cr, tab, backspace | \n, \r, \t, \b |
| special characters | \\, \?, \', \" |
| string constant (ends with '\0') | "abc...de" |

Pointers, Arrays & Structures

| | |
|---|--|
| declare pointer to <i>type</i> | <i>type *name</i> |
| declare function returning pointer to <i>type</i> | <i>type *f()</i> |
| declare pointer to function returning <i>type</i> | <i>type (*pf)()</i> |
| generic pointer type | void * |
| null pointer | NULL |
| object pointed to by <i>pointer</i> | * <i>pointer</i> |
| address of object <i>name</i> | & <i>name</i> |
| array | <i>name[dim]</i> |
| multi-dim array | <i>name[dim₁][dim₂]...</i> |

Structures

| | |
|--|--|
| struct <i>tag</i> { <i>declarations</i> }; | structure template declaration of members |
|--|--|

| | |
|---------------------------------------|-----------------------------|
| create structure | struct <i>tag name</i> |
| member of structure from template | <i>name.member</i> |
| member of pointed to structure | <i>pointer -> member</i> |
| Example. (*p).x and p->x are the same | |
| single value, multiple type structure | union |
| bit field with <i>b</i> bits | <i>member : b</i> |

Operators (grouped by precedence)

| | |
|--|---|
| structure member operator | <i>name.member</i> |
| structure pointer | <i>pointer->member</i> |
| increment, decrement | ++, -- |
| plus, minus, logical not, bitwise not | +, -, !, ~ |
| indirection via pointer, address of object | * <i>pointer</i> , & <i>name</i> |
| cast expression to type | (<i>type</i>) <i>expr</i> |
| size of an object | sizeof |
| multiply, divide, modulus (remainder) | *, /, % |
| add, subtract | +, - |
| left, right shift [bit ops] | <<, >> |
| comparisons | >, >=, <, <= |
| comparisons | ==, != |
| bitwise and | & |
| bitwise exclusive or | ^ |
| bitwise or (incl) | |
| logical and | && |
| logical or | |
| conditional expression | <i>expr₁ ? expr₂ : expr₃</i> |
| assignment operators | +=, -=, *=, ... |
| expression evaluation separator | , |

Unary operators, conditional expression and assignment operators group right to left; all others group left to right.

Flow of Control

| | |
|----------------------------------|--------------------|
| statement terminator | ; |
| block delimiters | { } |
| exit from switch, while, do, for | break |
| next iteration of while, do, for | continue |
| go to | goto <i>label</i> |
| label | <i>label:</i> |
| return value from function | return <i>expr</i> |

Flow Constructions

| | |
|------------------|--|
| if statement | if (<i>expr</i>) <i>statement</i> else if (<i>expr</i>) <i>statement</i> else <i>statement</i> |
| while statement | while (<i>expr</i>) <i>statement</i> |
| for statement | for (<i>expr₁</i> ; <i>expr₂</i> ; <i>expr₃</i>) <i>statement</i> |
| do statement | do <i>statement</i> while(<i>expr</i>); |
| switch statement | switch (<i>expr</i>) { case <i>const₁</i> : <i>statement₁</i> break; case <i>const₂</i> : <i>statement₂</i> break; default: <i>statement</i> } |

ANSI Standard Libraries

| | | | | |
|------------|-----------|------------|------------|------------|
| <assert.h> | <ctype.h> | <errno.h> | <float.h> | <limits.h> |
| <locale.h> | <math.h> | <setjmp.h> | <signal.h> | <stdarg.h> |
| <stddef.h> | <stdio.h> | <stdlib.h> | <string.h> | <time.h> |

Character Class Tests <ctype.h>

| | |
|--|-------------|
| alphanumeric? | isalnum(c) |
| alphabetic? | isalpha(c) |
| control character? | iscntrl(c) |
| decimal digit? | isdigit(c) |
| printing character (not incl space)? | isgraph(c) |
| lower case letter? | islower(c) |
| printing character (incl space)? | isprint(c) |
| printing char except space, letter, digit? | ispunct(c) |
| space, formfeed, newline, cr, tab, vtab? | isspace(c) |
| upper case letter? | isupper(c) |
| hexadecimal digit? | isxdigit(c) |
| convert to lower case? | tolower(c) |
| convert to upper case? | toupper(c) |

String Operations <string.h>

s,t are strings, cs,ct are constant strings

| | |
|---|------------------|
| length of s | strlen(s) |
| copy ct to s | strcpy(s,ct) |
| up to n chars | strncpy(s,ct,n) |
| concatenate ct after s | strcat(s,ct) |
| up to n chars | strncat(s,ct,n) |
| compare cs to ct | strcmp(cs,ct) |
| only first n chars | strncmp(cs,ct,n) |
| pointer to first c in cs | strchr(cs,c) |
| pointer to last c in cs | strrchr(cs,c) |
| copy n chars from ct to s | memcpy(s,ct,n) |
| copy n chars from ct to s (may overlap) | memmove(s,ct,n) |
| compare n chars of cs with ct | memcmp(cs,ct,n) |
| pointer to first c in first n chars of cs | memchr(cs,c,n) |
| put c into first n chars of cs | memset(s,c,n) |

C Reference Card (ANSI)

Input/Output <stdio.h>

Standard I/O

| | |
|---|---|
| standard input stream | <code>stdin</code> |
| standard output stream | <code>stdout</code> |
| standard error stream | <code>stderr</code> |
| end of file | <code>EOF</code> |
| get a character | <code>getchar()</code> |
| print a character | <code>putchar(<i>chr</i>)</code> |
| print formatted data | <code>printf("format", <i>arg</i>₁,...)</code> |
| print to string <i>s</i> | <code>sprintf(<i>s</i>, "format", <i>arg</i>₁,...)</code> |
| read formatted data | <code>scanf("format", &<i>name</i>₁,...)</code> |
| read from string <i>s</i> | <code>sscanf(<i>s</i>, "format", &<i>name</i>₁,...)</code> |
| read line to string <i>s</i> (< <i>max</i> chars) | <code>gets(<i>s</i>, <i>max</i>)</code> |
| print string <i>s</i> | <code>puts(<i>s</i>)</code> |

File I/O

| | |
|---|---|
| declare file pointer | <code>FILE *<i>fp</i></code> |
| pointer to named file | <code>fopen("name", "mode")</code> |
| modes: <i>r</i> (read), <i>w</i> (write), <i>a</i> (append) | |
| get a character | <code>getc(<i>fp</i>)</code> |
| write a character | <code>putc(<i>chr</i>, <i>fp</i>)</code> |
| write to file | <code>fprintf(<i>fp</i>, "format", <i>arg</i>₁,...)</code> |
| read from file | <code>fscanf(<i>fp</i>, "format", <i>arg</i>₁,...)</code> |
| close file | <code>fclose(<i>fp</i>)</code> |
| non-zero if error | <code>ferror(<i>fp</i>)</code> |
| non-zero if EOF | <code>feof(<i>fp</i>)</code> |
| read line to string <i>s</i> (< <i>max</i> chars) | <code>fgets(<i>s</i>, <i>max</i>, <i>fp</i>)</code> |
| write string <i>s</i> | <code>fputs(<i>s</i>, <i>fp</i>)</code> |

Codes for Formatted I/O: "%-+ 0w.pmc"

| | |
|--------------|---|
| - | left justify |
| + | print with sign |
| <i>space</i> | print space if no sign |
| 0 | pad with leading zeros |
| <i>w</i> | min field width |
| <i>p</i> | precision |
| <i>m</i> | conversion character: |
| <i>h</i> | short, |
| <i>l</i> | long, |
| <i>L</i> | long double |
| <i>c</i> | conversion character: |
| <i>d, i</i> | integer |
| <i>u</i> | unsigned |
| <i>c</i> | single char |
| <i>s</i> | char string |
| <i>f</i> | double |
| <i>e, E</i> | exponential |
| <i>o</i> | octal |
| <i>x, X</i> | hexadecimal |
| <i>p</i> | pointer |
| <i>n</i> | number of chars written |
| <i>g, G</i> | same as <i>f</i> or <i>e, E</i> depending on exponent |

Variable Argument Lists <stdarg.h>

| | |
|--|--|
| declaration of pointer to arguments | <code>va_list <i>name</i>;</code> |
| initialization of argument pointer | <code>va_start(<i>name</i>, <i>lastarg</i>)</code> |
| <i>lastarg</i> is last named parameter of the function | |
| access next unnamed arg, update pointer | <code>va_arg(<i>name</i>, <i>type</i>)</code> |
| call before exiting function | <code>va_end(<i>name</i>)</code> |

Standard Utility Functions <stdlib.h>

| | |
|---|---------------------------------------|
| absolute value of <i>int n</i> | <code>abs(<i>n</i>)</code> |
| absolute value of <i>long n</i> | <code>labs(<i>n</i>)</code> |
| quotient and remainder of <i>ints n, d</i> | <code>div(<i>n</i>, <i>d</i>)</code> |
| returns structure with <code>div_t.quot</code> and <code>div_t.rem</code> | |
| quotient and remainder of <i>longs n, d</i> | <code>ldiv(<i>n</i>, <i>d</i>)</code> |
| returns structure with <code>ldiv_t.quot</code> and <code>ldiv_t.rem</code> | |
| pseudo-random integer [0, <i>RAND_MAX</i>] | <code>rand()</code> |
| set random seed to <i>n</i> | <code>srand(<i>n</i>)</code> |
| terminate program execution | <code>exit(<i>status</i>)</code> |
| pass string <i>s</i> to system for execution | <code>system(<i>s</i>)</code> |

Conversions

| | |
|---|---|
| convert string <i>s</i> to double | <code>atof(<i>s</i>)</code> |
| convert string <i>s</i> to integer | <code>atoi(<i>s</i>)</code> |
| convert string <i>s</i> to long | <code>atol(<i>s</i>)</code> |
| convert prefix of <i>s</i> to double | <code>strtod(<i>s</i>, <i>endp</i>)</code> |
| convert prefix of <i>s</i> (base <i>b</i>) to long | <code>strtol(<i>s</i>, <i>endp</i>, <i>b</i>)</code> |
| same, but unsigned long | <code>strtoul(<i>s</i>, <i>endp</i>, <i>b</i>)</code> |

Storage Allocation

| | |
|-----------------------|--|
| allocate storage | <code>malloc(<i>size</i>), calloc(<i>nobj</i>, <i>size</i>)</code> |
| change size of object | <code>realloc(<i>pts</i>, <i>size</i>)</code> |
| deallocate space | <code>free(<i>ptr</i>)</code> |

Array Functions

| | |
|----------------------------|---|
| search array for key | <code>bsearch(<i>key</i>, <i>array</i>, <i>n</i>, <i>size</i>, <i>cmp</i>())</code> |
| sort array ascending order | <code>qsort(<i>array</i>, <i>n</i>, <i>size</i>, <i>cmp</i>())</code> |

Time and Date Functions <time.h>

| | |
|---|---|
| processor time used by program | <code>clock()</code> |
| Example. <code>clock()/CLOCKS_PER_SEC</code> is time in seconds | |
| current calendar time | <code>time()</code> |
| <i>time</i> ₂ - <i>time</i> ₁ in seconds (double) | <code>difftime(<i>time</i>₂, <i>time</i>₁)</code> |
| arithmetic types representing times | <code>clock_t, time_t</code> |
| structure type for calendar time comps | <code>tm</code> |
| <i>tm_sec</i> | seconds after minute |
| <i>tm_min</i> | minutes after hour |
| <i>tm_hour</i> | hours since midnight |
| <i>tm_mday</i> | day of month |
| <i>tm_mon</i> | months since January |
| <i>tm_year</i> | years since 1900 |
| <i>tm_wday</i> | days since Sunday |
| <i>tm_yday</i> | days since January 1 |
| <i>tm_isdst</i> | Daylight Savings Time flag |

| | |
|---|---|
| convert local time to calendar time | <code>mktime(<i>tp</i>)</code> |
| convert time in <i>tp</i> to string | <code>asctime(<i>tp</i>)</code> |
| convert calendar time in <i>tp</i> to local time | <code>ctime(<i>tp</i>)</code> |
| convert calendar time to GMT | <code>gmtime(<i>tp</i>)</code> |
| convert calendar time to local time | <code>localtime(<i>tp</i>)</code> |
| format date and time info | <code>strftime(<i>s</i>, <i>smax</i>, "format", <i>tp</i>)</code> |
| <i>tp</i> is a pointer to a structure of type <code>tm</code> | |

Mathematical Functions <math.h>

Arguments and returned values are double

| | |
|-------------------------------|--|
| trig functions | <code>sin(<i>x</i>), cos(<i>x</i>), tan(<i>x</i>)</code> |
| inverse trig functions | <code>asin(<i>x</i>), acos(<i>x</i>), atan(<i>x</i>)</code> |
| arctan(<i>y/x</i>) | <code>atan2(<i>y</i>, <i>x</i>)</code> |
| hyperbolic trig functions | <code>sinh(<i>x</i>), cosh(<i>x</i>), tanh(<i>x</i>)</code> |
| exponentials & logs | <code>exp(<i>x</i>), log(<i>x</i>), log10(<i>x</i>)</code> |
| exponentials & logs (2 power) | <code>ldexp(<i>x</i>, <i>n</i>), frexp(<i>x</i>, *<i>e</i>)</code> |
| division & remainder | <code>modf(<i>x</i>, *<i>ip</i>), fmod(<i>x</i>, <i>y</i>)</code> |
| powers | <code>pow(<i>x</i>, <i>y</i>), sqrt(<i>x</i>)</code> |
| rounding | <code>ceil(<i>x</i>), floor(<i>x</i>), fabs(<i>x</i>)</code> |

Integer Type Limits <limits.h>

The numbers given in parentheses are typical values for the constants on a 32-bit Unix system.

| | | |
|------------------------|-----------------------------|------------------|
| <code>CHAR_BIT</code> | bits in char | (8) |
| <code>CHAR_MAX</code> | max value of char | (127 or 255) |
| <code>CHAR_MIN</code> | min value of char | (-128 or 0) |
| <code>INT_MAX</code> | max value of int | (+32,767) |
| <code>INT_MIN</code> | min value of int | (-32,768) |
| <code>LONG_MAX</code> | max value of long | (+2,147,483,647) |
| <code>LONG_MIN</code> | min value of long | (-2,147,483,648) |
| <code>SCHAR_MAX</code> | max value of signed char | (+127) |
| <code>SCHAR_MIN</code> | min value of signed char | (-128) |
| <code>SHRT_MAX</code> | max value of short | (+32,767) |
| <code>SHRT_MIN</code> | min value of short | (-32,768) |
| <code>UCHAR_MAX</code> | max value of unsigned char | (255) |
| <code>UINT_MAX</code> | max value of unsigned int | (65,535) |
| <code>ULONG_MAX</code> | max value of unsigned long | (4,294,967,295) |
| <code>USHRT_MAX</code> | max value of unsigned short | (65,536) |

Float Type Limits <float.h>

| | | |
|---------------------------|---|----------------|
| <code>FLT_RADIX</code> | radix of exponent rep | (2) |
| <code>FLT_ROUNDS</code> | floating point rounding mode | |
| <code>FLT_DIG</code> | decimal digits of precision | (6) |
| <code>FLT_EPSILON</code> | smallest <i>x</i> so $1.0 + x \neq 1.0$ | (10^{-5}) |
| <code>FLT_MANT_DIG</code> | number of digits in mantissa | |
| <code>FLT_MAX</code> | maximum floating point number | (10^{37}) |
| <code>FLT_MAX_EXP</code> | maximum exponent | |
| <code>FLT_MIN</code> | minimum floating point number | (10^{-37}) |
| <code>FLT_MIN_EXP</code> | minimum exponent | |
| <code>DBL_DIG</code> | decimal digits of precision | (10) |
| <code>DBL_EPSILON</code> | smallest <i>x</i> so $1.0 + x \neq 1.0$ | (10^{-9}) |
| <code>DBL_MANT_DIG</code> | number of digits in mantissa | |
| <code>DBL_MAX</code> | max double floating point number | (10^{37}) |
| <code>DBL_MAX_EXP</code> | maximum exponent | |
| <code>DBL_MIN</code> | min double floating point number | (10^{-37}) |
| <code>DBL_MIN_EXP</code> | minimum exponent | |
